Make reels with *code*

The exact free tools behind every "AI Tools with Yara" episode.

The stack

Tool	What it does	Cost
Claude Code	Writes and edits the video scenes from a plain-English brief	Claude plan
Remotion	Turns React code into an MP4 (titles, captions, transitions)	Free for individuals and teams up to 3 (check the licence)
Kokoro-82M	Natural AI voice-over, runs on your own computer	Free, open source (Apache-2.0)
Google Flow	The short clips of Yara, our AI presenter	Daily credits
ffmpeg	Loudness, cutting and converting media	Free

1 Start a Remotion project

```
$ npx create-video@latest
```

Then give Claude the official Remotion know-how:

```
$ npx skills add remotion-dev/skills
```

2 Ask Claude for the reel

Open Claude Code in the project and describe it like a brief:

```
Make a 45-second vertical reel (1080x1920): a hook title, 3 steps with a big STEP
card each,
word-by-word captions, our brand colours, and a "Comment WORD" ending.
```

Like this? Follow @azmin_digital for a new free guide every week.
See our live scroll-film website demos: **work.azmindigital.com**

3 Add a free voice

```
$ pip install kokoro-onnx soundfile
```

Write one line per scene, generate a WAV per line, and let Claude time the captions to the words.

4 Render

```
$ npx remotion render src/index.ts MyReel out/reel.mp4
```

Captions, music and sound effects are all in the code, so one command makes the finished MP4.

Why code instead of an editor?

- **Reuse:** one template, a new episode every day. Change the words, keep the look.
- **On brand every time:** colours, fonts and logo live in one file.
- **Fast changes:** "make it slower", "new colour" or "bigger captions" is one sentence to Claude.

Tips from our own reels

- Keep it 40–50 seconds, one idea per screen, voice at normal speed.
- Captions: 3 words at a time, big, the spoken word highlighted.
- Music low under the voice; small sound effects on each new screen.
- Make your own sound effects with code, or use a licensed library: no copyright strikes.

Be honest about AI

Yara is an AI presenter and we say so. Label AI people and voices clearly, and never present them as real customers.

Next: comment **SKILL** on our Ep 1 reel for the find-skills guide: it helps Claude find skills like Remotion's.
